High Power LED
Chip on Board

COB C U Series
Double Color

Features & Benefits

- High lumen output
- Simple assembly reduces manufacturing cost
- Low thermal resistance
- InGaN/GaN MQW LED with long time reliability

Applications

- Film production
- Still photography
- Outdoor Illumination

4. Outline Drawing & Dimension
Circuit mode :23 series 96 parallel

Notes:

T_s point and measurement method:

① Measure one point at the cathode pad, if necessary remove PSR of PCB to reach T_s point.

② All pads must be soldered to the PCB to dissipate heat properly, otherwise the LED can be damaged.

③ All dimensions in mm. Tolerances unless mentioned is ±0.2mm.

Precautions:

1) Pressure on the LEDs will influence to the reliability of the LEDs. Precautions should be taken to avoid strong pressure on the LEDs. Do not put stress on the LEDs during heating.

2) Re-soldering should not be done after the LEDs have been soldered. If re-soldering is unavoidable, LED`s characteristics should be carefully checked before and after such repair.

3) Do not stack assembled PCBs together. Since materials of LEDs is soft, abrasion between two PCB assembled with LED might cause catastrophic failure of the LEDs.

5. Reliability Test Items & Conditions

a) Test Items

Test Item	Test Condition	Test Hour / Cycle	Sample No.
Room Temperature Life Test	25℃, DC 7100mA	1000 h	10
High Temperature Life Test	85℃, DC 7100 mA	1000 h	10
High Temperature Humidity Life Test	85℃, 85 % RH, DC 7100 mA	1000 h	10
Low Temperature Life Test	-40℃, DC7100 mA	1000 h	10
Powered Temperature Cycle Test	-40 ℃ ~ 85℃, each 10 min, On/Off 5min , Temp. Change Time 20min, DC 7100mA	100 cycles	10
Thermal Cycle	-40℃ / 15 min ↔ 105℃ / 15 min → Hot plate 180℃	100 cycles	10
High Temperature Storage	105℃	1000 h	10
Low Temperature Storage	-40℃	1000 h	10

b) Criteria for Judging the Damage

Item	Symbol	Test Condition (Ts = 25℃)	Limit	
			Min	Max
Forward Voltage	V_F	I_F =7100mA	Init. Value * 0.9	Init. Value * 1.1
Luminous Flux	$Φ_V$	I_F= 7100mA	Init. Value * 0.7	Init. Value * 1.1

8. Precautions in Handling & Use

1) Store the parts in a dry, nitrogen-purged cabinet or container that actively maintains the temperature at 20℃-30℃ and the RH at no greater than 60%.

2) By using anti-static-electricity bracelets/ cushions/ overalls/ shoes/gloves and anti-static-electricity containers, it can effectively prevent static electricity and surge. The soldering iron point should be properly grounded. Use soldering by hand：Soldering bit temperature shall be 280℃ or less Heatin time: 10 seconds or less.

3) You need to take the protective measures for the product being sensitive to static electricity. It can lead to product damage or even the total invalid when the high voltage current made by static electricity is beyond the maximum rating. The ground resistance can't beyond 10Ω.

4) Please do not make the thermal grease, oil exposed to the light-emitting surface, air gun can be used to remove dirt. Guns Pressure: 0.5MPa, Time: 1 to 2 seconds, Distance: more than 20cm.

5) Any time, don't press colloid part, lest product surface come to be damaged or even invalid. It is recommended to design PCB with ground circuit. Pay special attention to the use environment of the products: Humidity must be between 50% and 80%, or else electrostatic breakdown and overcurrent damage would occur. The use temperature is -40℃~85℃. When using this product, please observe the absolute maximum ratings and the instructions for using outlined in these data sheets. LEDTEEN assumes no responsibility for any damage resulting from use of the product which does not comply with the absolute maximum ratings and the included in these data sheets.
6) The thermal design to draw heat away from the LED junction is most critical parameter for an LED illumination system. High operating temperatures at the LED junction adversely affect the performance of LED's light output and lifetime. Therefore the LED junction temperature should not exceed the absolute maximum rating in LED illumination system.

7) During using this product, the country relative safety standards (eg. GB7000.1-2007) should be accorded with. We will not be liable for the users' acts of non-observance of the country safety standards.
